Your Business Performance with phenomenal Module of AgroERP24 Software

“Modules” are the main mechanism of the argo ERP software; which will help you to boost up your agro-feed manufacturing business performance.

Dynamic Dashboard:

The dashboard is a significant part of any product. To bring all the vital data about your business at the tip of your finger, we make a remarkable dashboard. You can know about the number of Sale Order, Due Collection, Stock, Manufacture, Purchase details, market scenarios and Top & slow Moving Product. The dashboard will show you product info for every most selling product by a histogram.

Purchase Management:

Purchasing raw materials for production is one of the major parts of the Agro-Feed/Food manufacturing industry. And it's important to make all the raw materials available before starting production. Moreover, this module is directly integrated with the account management module as in whenever & whatever raw maternal or chemical purchases done by the Agro-Feed/Food will be recorded in the accounting module. Although there are three types of procurement & purchase module system types: local, foreign, and direct purchase; this purchase and procurement management module will include the following:

- Create Supplier
- Create Raw Matarial Item
- Create Purchase Order
- Purchase Details List

Production Management:

There are lots of things that need to keep in mind during the manufacturing of the Agro-Feed good, hence this module can help you to stick and track with the daily production target. Beside, this module will aid you with the production procedure, follow the recipe recorded in the production module. Moreover, production management modules witness and record the whole conversion of the raw maternal into furnished finished goods. In short, production management module also covers the below sub modules:

- Create Finish Goods Item
- Recipe Management
- Material Consume
- Production Process
- Finish Good List

Sales invoicing/Ordering system:

It has a fully automatic Sales/Ordering System. Sales Representative creates order from field and multiple approvals from admin automate generate Invoice.

- Create Sales Order
- Approved/Reject by Accounts/Admin
- Generate Invoice (Approved Order)
- Delivery Store

Inventory Management:

Inventory management modules not only keep track of raw material but also keep track of finished goods, their expiry dates, the quantity of material stored etc. Some of the essential submodules of the inventory management module are; You can learn about each of your product items:

- Current Raw Material Stock
- Stock Adjustment
- Current Finish Goods Stock.
- Summary Report
- Return Quantity

Real time Reports

Generating reports is a very hard task and also time-consuming. To save your valuable time AgroERP24 has a very useful module Reports. You will find all your reports here. They are:

- Daily Sales/Manufacture Report
- Stock Summary Report
- Dealer Ledger
- Sale Report product wise
- Purchase Report
- Sale Report category wise
- Due Report
- Outstanding Report
- Daily Collection Report
- Stock Report
- Return Report

Accounts Management:

Keeping the track of every inflow & outflow is one of the vital activity in every business. And that is what this account module does in this agro ERP software. This module keeps the record of all the financial activities being done to operate the business. In addition, at the end of every month/year this module will provide an automated financial report, which will help you to forecast the expense of the following month. Most importantly, accounting management module will cover this following modules:

- Dealer Ledger
- Dealer Commission
- Dealer Collection
- Reports
